

WILDA

GEOS — Global Emergency Overview System

KEYFEATURES:

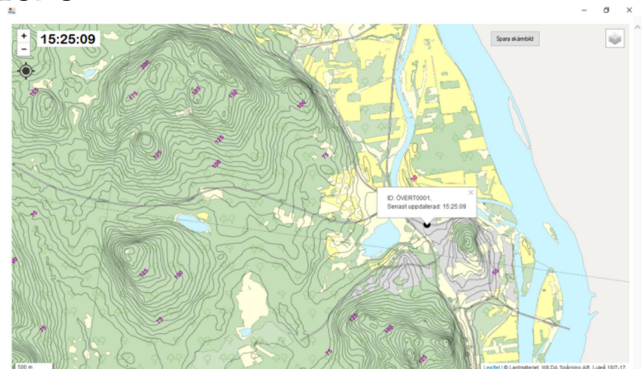

- No need for external infrastructure
- Automatic building of mesh network
- Smart network allows for infinite amount of users
- AES128 encryption
- Lifetime – transmitting: 10 hours
- Lifetime – sleeping: 3 months
- Charging time: 4 hours
- Small and compact design
- Weight: 150 grams
- Water and shock resistant

Safety Everywhere

With outdoor fires increasing in frequency, the need for a reliable positioning system is crucial. WILDA was funded by two radio engineers and has grown to a company offering a reliable positioning system for extreme environments.

Place a tracker unit on each person you want to keep track of and WILDA's system will do the rest, automatically feeding real-time position into your commander platform.

Free up time on the conventional analog radio network by never having to ask for a position again. Plan and monitor the incidents to guarantee a safe and efficient management of the incident.

No extra work for the firefighters, they can focus on putting out the fire whilst you can monitor the progress in real-time.

We are looking forward to hear from you
